

How to Make My House Your House

Countertops

Steel bathroom and kitchen countertops and a floating steel windowsill in the bedroom were fabricated by Bowery Restaurant Supply. The steel, a cool counterpoint to glass tile and the warmth of the wood grain, emphasizes clean lines and gives the illusion of volume. www.boweryrestaurantsupply.com

Tracking

The track system used to enclose the bedroom and hang the sailcloth blinds is Häfele's sliding-door fitting HAWA Junior 80/Z. Goolrick used it on the floor-to-ceiling sanded-Plexiglas kitchen/foyer panels and the opaque bedroom/living-room panels. www.hafeleonline.com

Lighting

"I got into lighting [design] because I couldn't find anything good enough for the spaces I was designing for my clients," says Goolrick. "We used to make them as placeholders until the client could find the right light, but we'd go back months later and the lights would still be there." The ceiling light shade is covered in a fine white linen with a frame of brushed nickel. www.goolrick.com

Ventilation

A Cirrus Hugger fan from the Modern Fan Company hangs above the bed. Designed by Ron Rezek, it's available through many sources, including Lee's Studio and Lighting by Gregory. "It was the simplest, smallest

fan I could find," says Goolrick. "I thought, I'm going to feel like I'm in a blender if I get the big one." www.modernfan.com

Home Office

Stowed as tidily as jib sheets and a spinnaker in her made-to-measure cabinetry, Goolrick's scaled-down home office doesn't lack amenities: a Canon i80 color bubble-jet printer, an Apple laptop with a 12-inch screen, an Apple wireless station, a Bose subwoofer, and a Sony CD player. This is also where her tiny, thumb-size Apple mini flash drive (for recording and carrying large-format drawings that she doesn't want to email to herself) lives. www.canon.com / www.apple.com / www.bose.com / www.sony.com ■
